UST 7Y | Two-month selloffs above 60 bp

Non-overlapping month-start schedule: Jan-Mar, Mar-May, May-Jul, Jul-Sep, Sep-Nov, Nov-Jan.

105 completed periods | First observed quote in each boundary month | Changes in basis points

COMPLETED PERIODS	RISES >60 BP	MEAN / STANDARD DEVIATION	5TH / 95TH PERCENTILE
105	**5 of 105 (4.8%)**	**+2.1 / 36.5 bp**	**-56.0 / +50.7 bp**

Method. Yield change = (ending yield % - initial yield %) x 100. Endpoints use the first available Bloomberg weekday quote of the boundary month; adjacent periods share only that boundary quote. No filling or interpolation. The strict filter is rise >60 bp, not absolute change.

Sample. Completed intervals run from 2 Mar-1 May 2009 through 1 Jul-1 Sep 2026. Bloomberg history begins 26 Feb 2009, so its partial February is excluded. Quotes were downloaded through 26 Oct 2026; the Sep-Nov 2026 interval is not yet complete and is excluded.

Interpretation. The orange tail contains five episodes. In the next two-month period, yields rose further in 3 cases and fell in 2; the mean subsequent move was +2.7 bp. These are descriptive results from a small sample, not a mean-reversion forecast.

The five qualifying episodes

Starting and ending yields are Bloomberg generic 7Y yields. Positive subsequent changes mean the selloff continued.

Episode start / end	Initial 7Y (%)	End 7Y (%)	Yield rise (bp)	Subsequent 2m start / end	Next 2m (bp)	Market backdrop (historical context)
01 Nov 2010 03 Jan 2011	1.900	2.724	**+82.4**	03 Jan 2011 01 Mar 2011	**+7.7**	Stronger economic news, a growth-supportive tax-cut agreement and reassessment of the scale of Fed Treasury purchases contributed to rising yields during QE2. [1]
01 May 2013 01 Jul 2013	1.075	1.922	**+84.7**	01 Jul 2013 02 Sep 2013	**+33.0**	Taper tantrum: signals that the Fed could reduce asset purchases triggered a broad Treasury selloff and repricing of longer-term yields. [2]
01 Nov 2016 02 Jan 2017	1.612	2.246	**+63.4**	02 Jan 2017 01 Mar 2017	**+4.3**	Post-election reflation: investors anticipated more expansionary fiscal policy. The expected policy-rate path steepened, with some increase in term premiums. [3]
01 Mar 2022 02 May 2022	1.686	3.035	**+134.9**	02 May 2022 01 Jul 2022	**-11.6**	Inflation and tightening repricing: inflation pressure and expectations of faster Fed tightening pushed Treasury yields higher, largely through rising real yields. [4]
01 Sep 2022 01 Nov 2022	3.365	4.168	**+80.3**	01 Nov 2022 02 Jan 2023	**-19.9**	Further hawkish repricing: expectations of a more restrictive policy path and higher real yields accompanied the second-half 2022 Treasury selloff. [5]

Follow-through: 3 continued selloffs versus 2 partial reversals; mean next-period change +2.7 bp. Subsequent moves are measured between the two dates shown, rather than from the original episode start. The backdrop summaries contextualize the broader Treasury market; they are not a causal decomposition of each 7Y move.
